# CAM2® SmartInspect
The measurement software for everyone

FARO®

NEW - Live on-screen 3D view of measurements
With the Live on-screen view, users can see the results from their measurements shown graphically in projection plane views. The graphical view can also be rotated to show a 3D representation of all the measured features.

NEW - On-screen dimensioning
Interact directly with the graphical view to create dimensions and constructions needed to extract information that cannot be measured directly. Position the dimensions around the measurements to get the view as you need it.

NEW – Whiskers and tolerances
Whiskers and tolerance graphics can be shown on individual measured features showing detailed error distribution with color that highlight the specific areas of the part that are out of tolerance.

NEW – Labels
Labels can be shown in the graphical view to provide immediate information about the measurement features without further user actions.

Engineered for simplicity, FARO's CAM2 SmartInspect is the perfect software for any user that is looking for non-CAD based inspection. The software design is simple and intuitive. Even users without any 3D metrology background can be easily trained.

CAM2 SmartInspect features a live graphical view or a picture-based measurement guidance view as a means to supporting the measurement process. Interactions with the live view provide an intuitive platform to creating the necessary dimensions and constructions that cannot be measured directly.

Most Common Applications

Automotive: Tool Building & Certification, Alignment, Part Inspection
Molding/Tool & Die: Mold and Die Inspection, Prototype Part Scanning
Metal Fabrication: OMI, First Article Inspection, Periodic Part Inspection
Aerospace: Alignment, Tooling & Mold Certification, Part Inspection

Benefits

▶ **Interactivity:** Live feedback displaying results in a graphical 3D view; Immediate recalculation of results

▶ **Consistency:** Image-based support for measurement guidance; Live error display during measurements

▶ **Flexibility**: Immediate measurement; one click repeat part measurement

▶ **Reliability:** NIST / PTB certification

Additional Features

Smart Suggestion Box
Suggestions are always available to the users on what they can do next with the objects that have been selected. This allows new users to get hints on the capabilities are available while expert users can use this feature to improve their workflow.

Repeated Part Measurement
Once a part has been measured, that measurement can be repeated with a single click. Using the Image View mode, the second measurement can be performed by any user.

QuickTool Import
The QuickTools functionality permits import and use of QuickTools programs generated in FARO® CAM2 Measure 10.

Picture support for guided repeat measurement
As with its predecessor CAM2 Gage product, SmartInspect offers the ability to associate real part pictures where markers can be added to provide clear visual guidance to measurement operators. This enables anyone to measure a part once a routine has been defined.

Capabilities

Measurement
- Seamless connection to FARO Gage and FaroArm devices
- Direct measurement mode
- Online programming mode always on
- Easily align to part
- Live feedback during measurement
- Guided Geometry Measurement

Programming
- Record steps for a part program (online/offline)
- Play steps in a measurement program
- Integrated programming module

Alignments
- Coordinate system
- 3.2.1
- Three-feature

Nominals
- Create nominal features by entering values

Reporting
- Versatile export formats
- Export to HTML, text, Microsoft® Excel, PDF

Software Version
Basic: All functionality with images
Pro: All functionality with images and 3D view

Specifications

Platform: Windows® XP ▪ Windows® 7
Languages: Chinese, English, French, German, Italian, Japanese, Polish, Portuguese, Russian, Spanish, Turkish

ISO 9001
BUREAU VERITAS
Certification

ANAB
ACCREDITED

GSA Contract Holder
